Oculoheel® Eye Drops
Equivalent to Tetryzoline1)

In a prospective, controlled cohort study with 769 patients, the efficacy of Oculoheel was compared to that of α-sympathomimetic eye drops (0.5 mg/ml tetryzoline HCl). The study included cases of slight to moderate conjunctivitis. The effectiveness of Oculoheel was equivalent to tetryzoline as measured by the mean symptom score. A substantial improvement of symptoms occurred within 4 to 7 days for over 80% of the patients in both groups. In the majority of cases, the dosages of both Oculoheel and tetryzoline were 3 x 1 drops per day in each eye for a maximum of 14 days. Both medications were well tolerated throughout the study.

Reference:

Benefits of Oculoheel®

- Documented efficacy1)
- Unlike α-sympathomimetics, there are no known contraindications or drug interactions associated with the administration of Oculoheel
- Preservative-free
- Hygienic, convenient, single-dose format that fits in every pocket
- Excellent compliance1)

Treatment Guidelines

Dosage
The recommended dosage is 1 drop into each affected eye 3 times daily.

Unused medication
The unused medication in an open phial must be discarded to avoid contamination. Oculoheel eye drops are sterile until they are opened and do not contain preservatives.

Length of therapy
As a homeopathic combination preparation, Oculoheel is especially suitable for long-term treatment.

Suitability for contact lens wearers
Oculoheel is especially suited for wearers of contact lenses as it does not contain preservatives.

Additional Therapy

As supplement to the eye drops therapy, Oculoheel tablets may be used.
Available in packs of 50 and 250 tablets.
For a Clearer View

Conjunctivitis and dryness are the most prevalent eye disorders. Their incidence continues to grow due to increasing air-pollution and ozone levels, computer based work, air-conditioning, use of contact lenses, and allergies.

Oculoheel, a homeopathic combination preparation, effectively alleviates the following ocular symptoms:

- **Dry eyes**
- **Watery eyes**
- **Redness**
- **Itching**
- **Light sensitivity**

Homoeopathic Eye Drops

**Oculoheel**

Composition: 1 phial with 0.45 ml (= 0.45 g) cont.: Euphrasia officinalis D5, Cochlearia officinalis D5, jaborandi D5, Echinacea angustifolia D5, 110.7 mg each.

Indications: For inflammations, overstrained eyes, irritated or tearing eyes, gritty feeling in the eyes, light sensitivity, and eyelid inflammations.

Contraindications: None known. Side effects: None known. Interactions with other medication: None known. Dosage: In general, allow 1 drop to drip into the affected eye, 3 times daily. No use of the phial may be used only once. The contents of the phial are sufficient for one application — i.e., for drip- ping once into the left and right eye as needed. Do not open the phial until just before application. Discard any phial which may still contain solution, and do not use later.

Instructions for use:

1. Separate the phial by turning and pulling the strip.
2. Unscrew the closure cap.
3. Tilt your head backward, hold the phial vertically and pointing downward, and allow drops to drip from the phial into the conjunctival sac of the eye by slightly applying pressure onto the phial from above.

Package size: Packs with 30 phials, each containing 0.45 ml of solution.
