

Hormeel[®]S

Effective Treatment with Hormeel[®]S

The efficacy of Hormeel S drops has been confirmed by a multicentre prospective cohort study of 345 women suffering from premenstrual syndrome, menopausal symptoms, or other disorders of the female cycle. Very good to good results were achieved in more than 80% of women treated. One-third of the women saw improvement of their symptoms within two weeks and an additional 30% improved after two to four weeks of treatment. Patient tolerance of Hormeel S was rated excellent or good in 98% of cases.²⁾

Hormonal dysfunctions are among the most frequent health problems of women in their child-bearing and menopausal years. Because of possible undesirable side effects, hormone substitution is not always the optimum solution.¹⁾ Recently many women have begun to refuse hormone treatment and to look for safer yet effective alternatives.

Hormeel S may be used to treat:

-  Premenstrual syndrome (PMS)
-  Menopausal symptoms
-  Menstrual disorders
-  Dysmenorrhea

Since this product information is not specific to individual countries, preparation names and formulas may vary slightly from country to country.

Revised: July 2004

Does Hormeel S have any side effects?

Hormeel S may induce premature menstruation. No other side effects are known.

Is Hormeel S safe to take with other medications?

No drug interactions have been reported. In fact, combining Hormeel S with other homoeopathic medications can enhance its effectiveness. For example, Hormeel S may be used together with Spascupreel and Gynaecoheel for dysmenorrhea, or as an adjunct therapy (in addition to Klimakt-Heel) for menopausal symptoms.
